

ISSUE #1 | CYBERSECURITY AWARENESS MONTH 2026

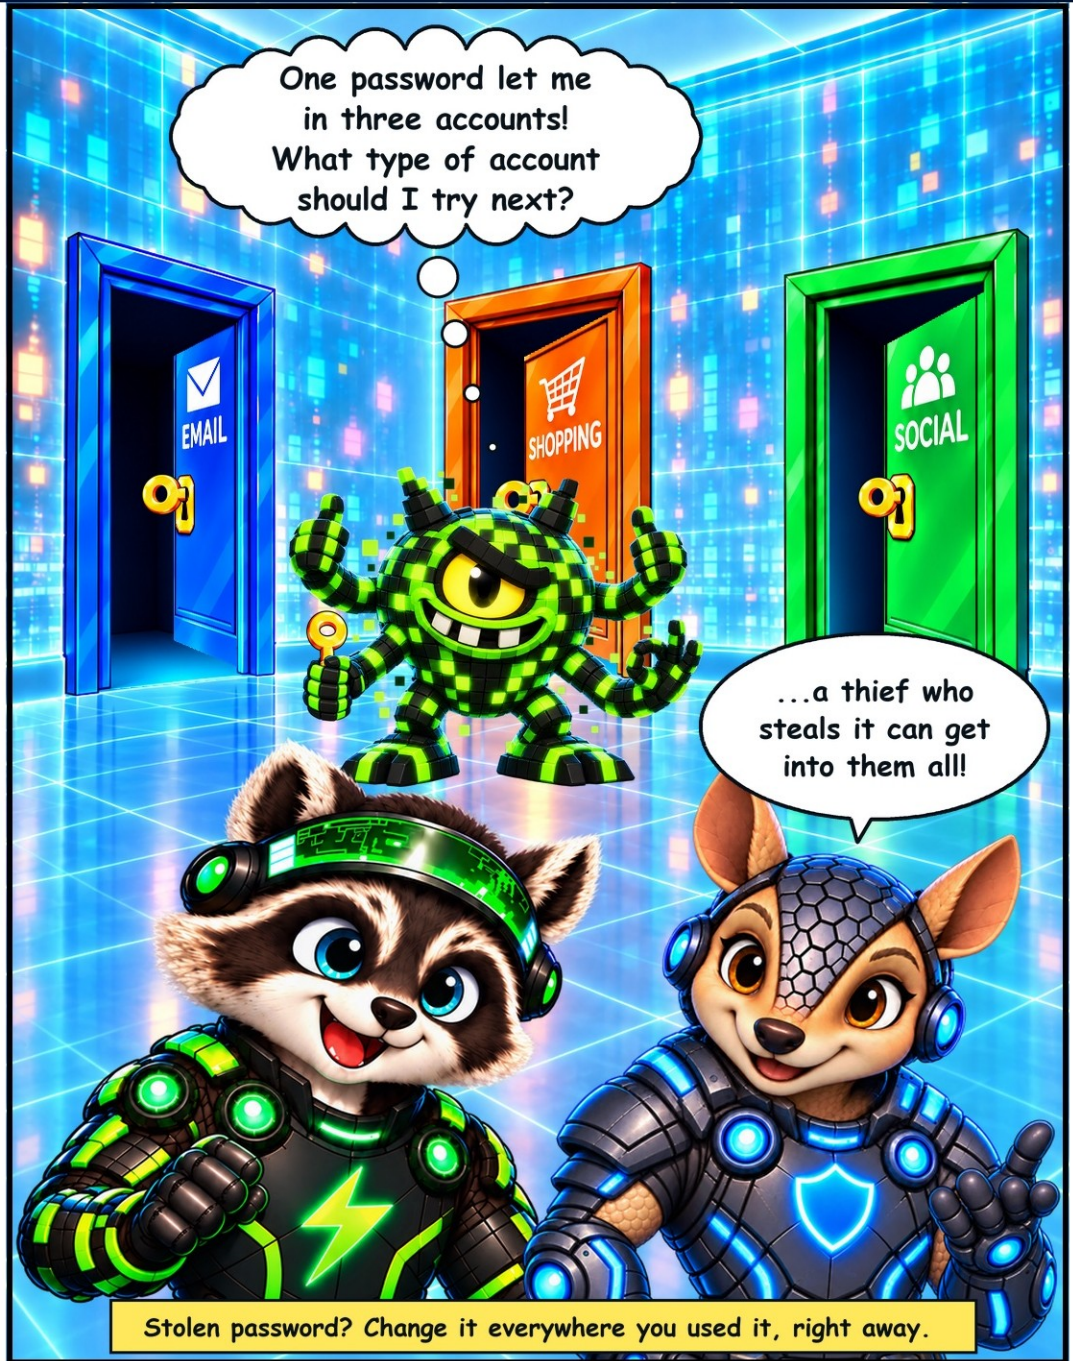

Every account needs a strong, unique password. Here's why.

One password for every account sounds easy, but...

One password let me in three accounts! What type of account should I try next?

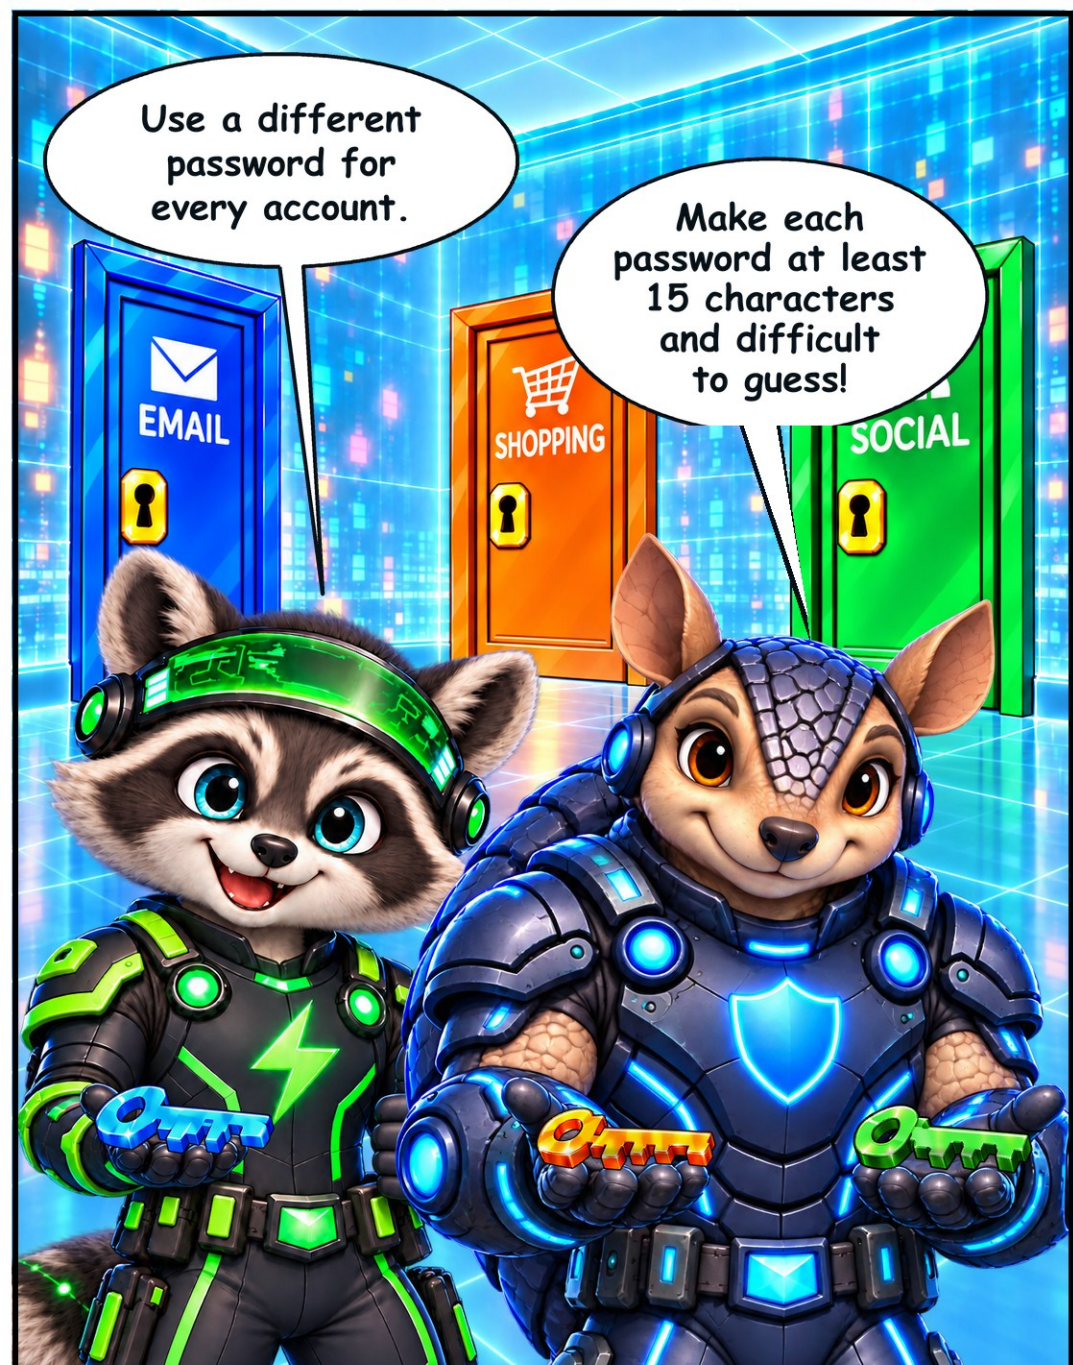

...a thief who steals it can get into them all!

Stolen password? Change it everywhere you used it, right away.

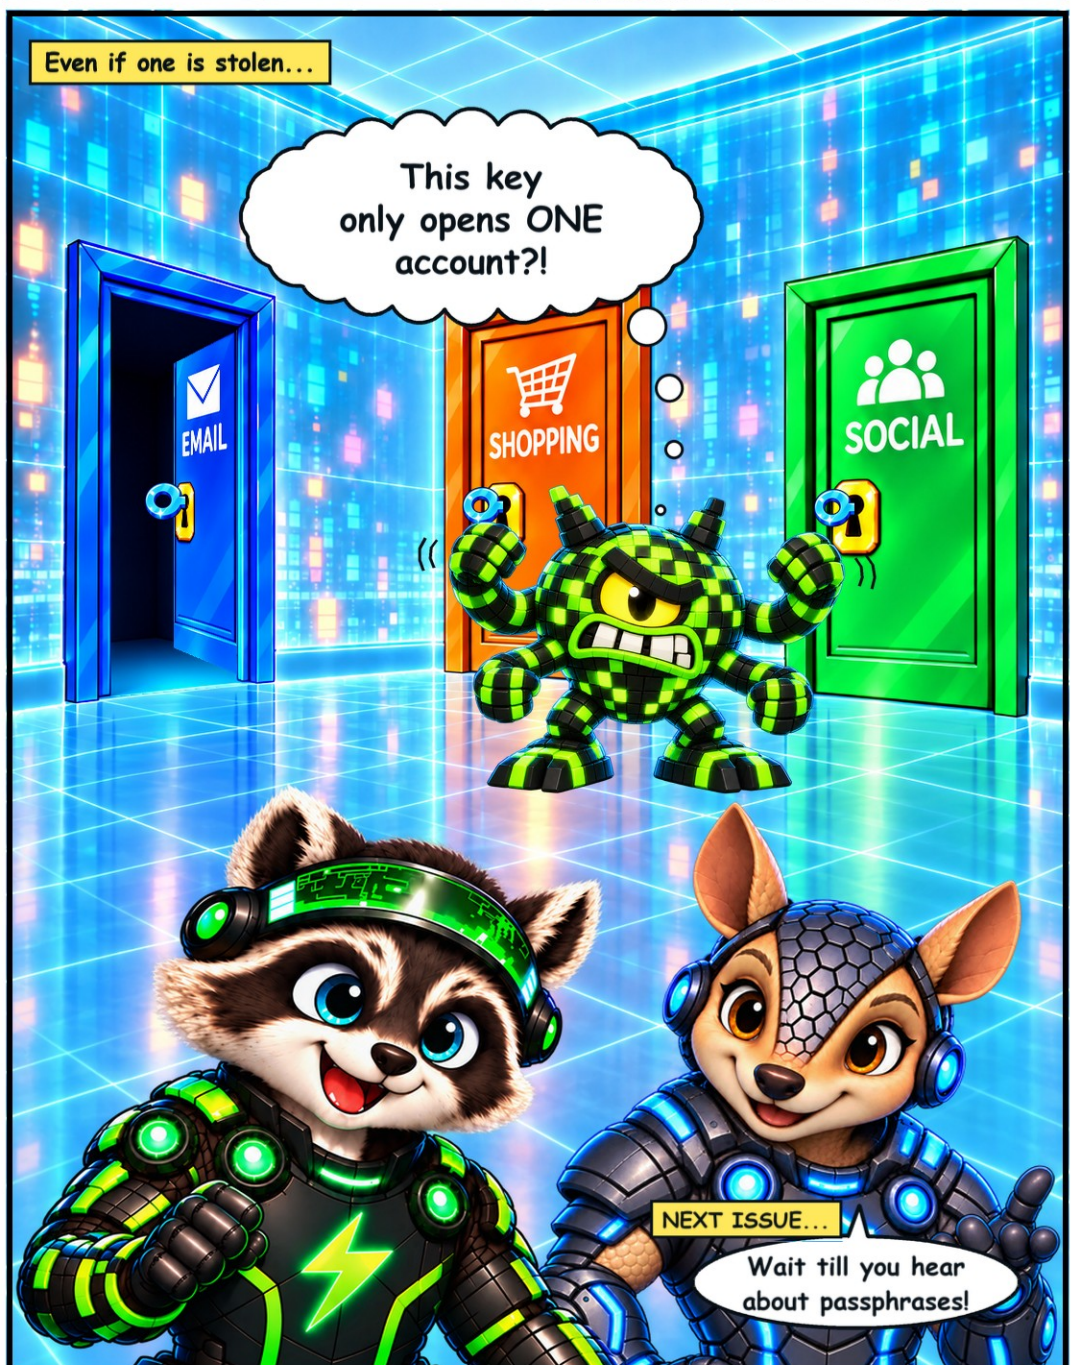

Use a different password for every account.

Make each password at least 15 characters and difficult to guess!

Even if one is stolen...

This key only opens ONE account?!

NEXT ISSUE...

Wait till you hear about passphrases!

YOUR MOVE: Replace one reused password with a long, unique one.
